Mede/Analytics®

Enable faster, smarter insights to keep pace with the growing complexities of healthcare data

Traditional analytics requires significant effort from analysts to build reports and domain experts to extract insights. This process is time consuming, costly and prone to error. MedeElevate is seamlessly woven into our solutions to deliver augmented analytics capabilities, enriching insights and making the complex simple.

By utilizing advanced data science technologies such as machine learning and artificial intelligence, MedeElevate can assist in data preparation, insight generation and insight explanation. Delve quickly into the why behind the results and take the next best action to generate clinical, operational and financial improvements.

Predictive analytics provides insights on future trends

Why you need MedeElevate

The amount and complexity of data has grown to a point where healthcare leaders need intelligent tools to sift through the data, identify patterns, and automatically highlight what's important for analysts and decision makers. The augmented analytics capabilities MedeElevate makes available throughout our solutions helps users more easily find relevant data, ask the best questions, and quickly uncover insights in the context of their business without the need for deep, technical skills or expertise in working with data.

MedeElevate enables augmented analytics capabilities natively in MedeAnalytics solutions, so you can:

- Examine historical data and predict future trends
- Automate routine processes or workflows
- Automatically annotate descriptive narratives that describe the most important information in a chart or table
- Leverage rules engines to categorize and compare data, expediting identification of deviations
- Automatically trigger alerts to expose areas of investigation
- Categorize and label data with recommended next steps

Use propensity to pay intelligence to work smarter

Categorization models based on risk rules

Predictive models trend future results

Contextualize data with auto-generated narratives

Reduce time spent analyzing reports with smart narratives

Finding the most important details in charts can be tedious. MedeElevate's smart narratives are built into charts to call out the important details, surface the most important insights, and highlight the key information you need to understand. Rather than spend time sifting through a multi-category chart, use smart narratives to immediately extract important details and relevant contextual information.

Make intelligent decisions for the future with predictive analytics

As part of our Business Office Suite, MedeElevate capabilities allow for users to predict Cash Flow and Balance Trends. The advanced algorithms accurately automate cash flow trends — ultimately reducing time spent on reports. Our robust models leverage A/R portfolio characteristics, transaction history and payment behavior trends to help you increase the accuracy of cash flow predictions and make more intelligent business decisions.

System-wide support for numerous use cases

As a key element of our data fabric, MedeElevate makes augmented analytics accessible throughout the enterprise. With its capabilities, you can meet a variety of pressing needs, such as automated HCC classification, claims risk assessment, and guarantor propensity-to-pay predictions.

"Early adopters of augmented analytics have the potential to realize more strategic and differentiating business benefits from their analytics investments than those who wait until these technologies are widely adopted."

- Gartner, October 2019
