

Catch upstream errors early with **real-time, longitudinal insights**

Nearly half of claim denials are caused by front-end revenue cycle issues tied to registration, eligibility and authorization.¹

With **Workforce Quality Insights**, revenue cycle managers can access personalized, collective dashboards, enabling essential visibility into how point-of-service activities and behaviors are impacting back-end financial performance.

Monitor staff performance for early intervention where needed

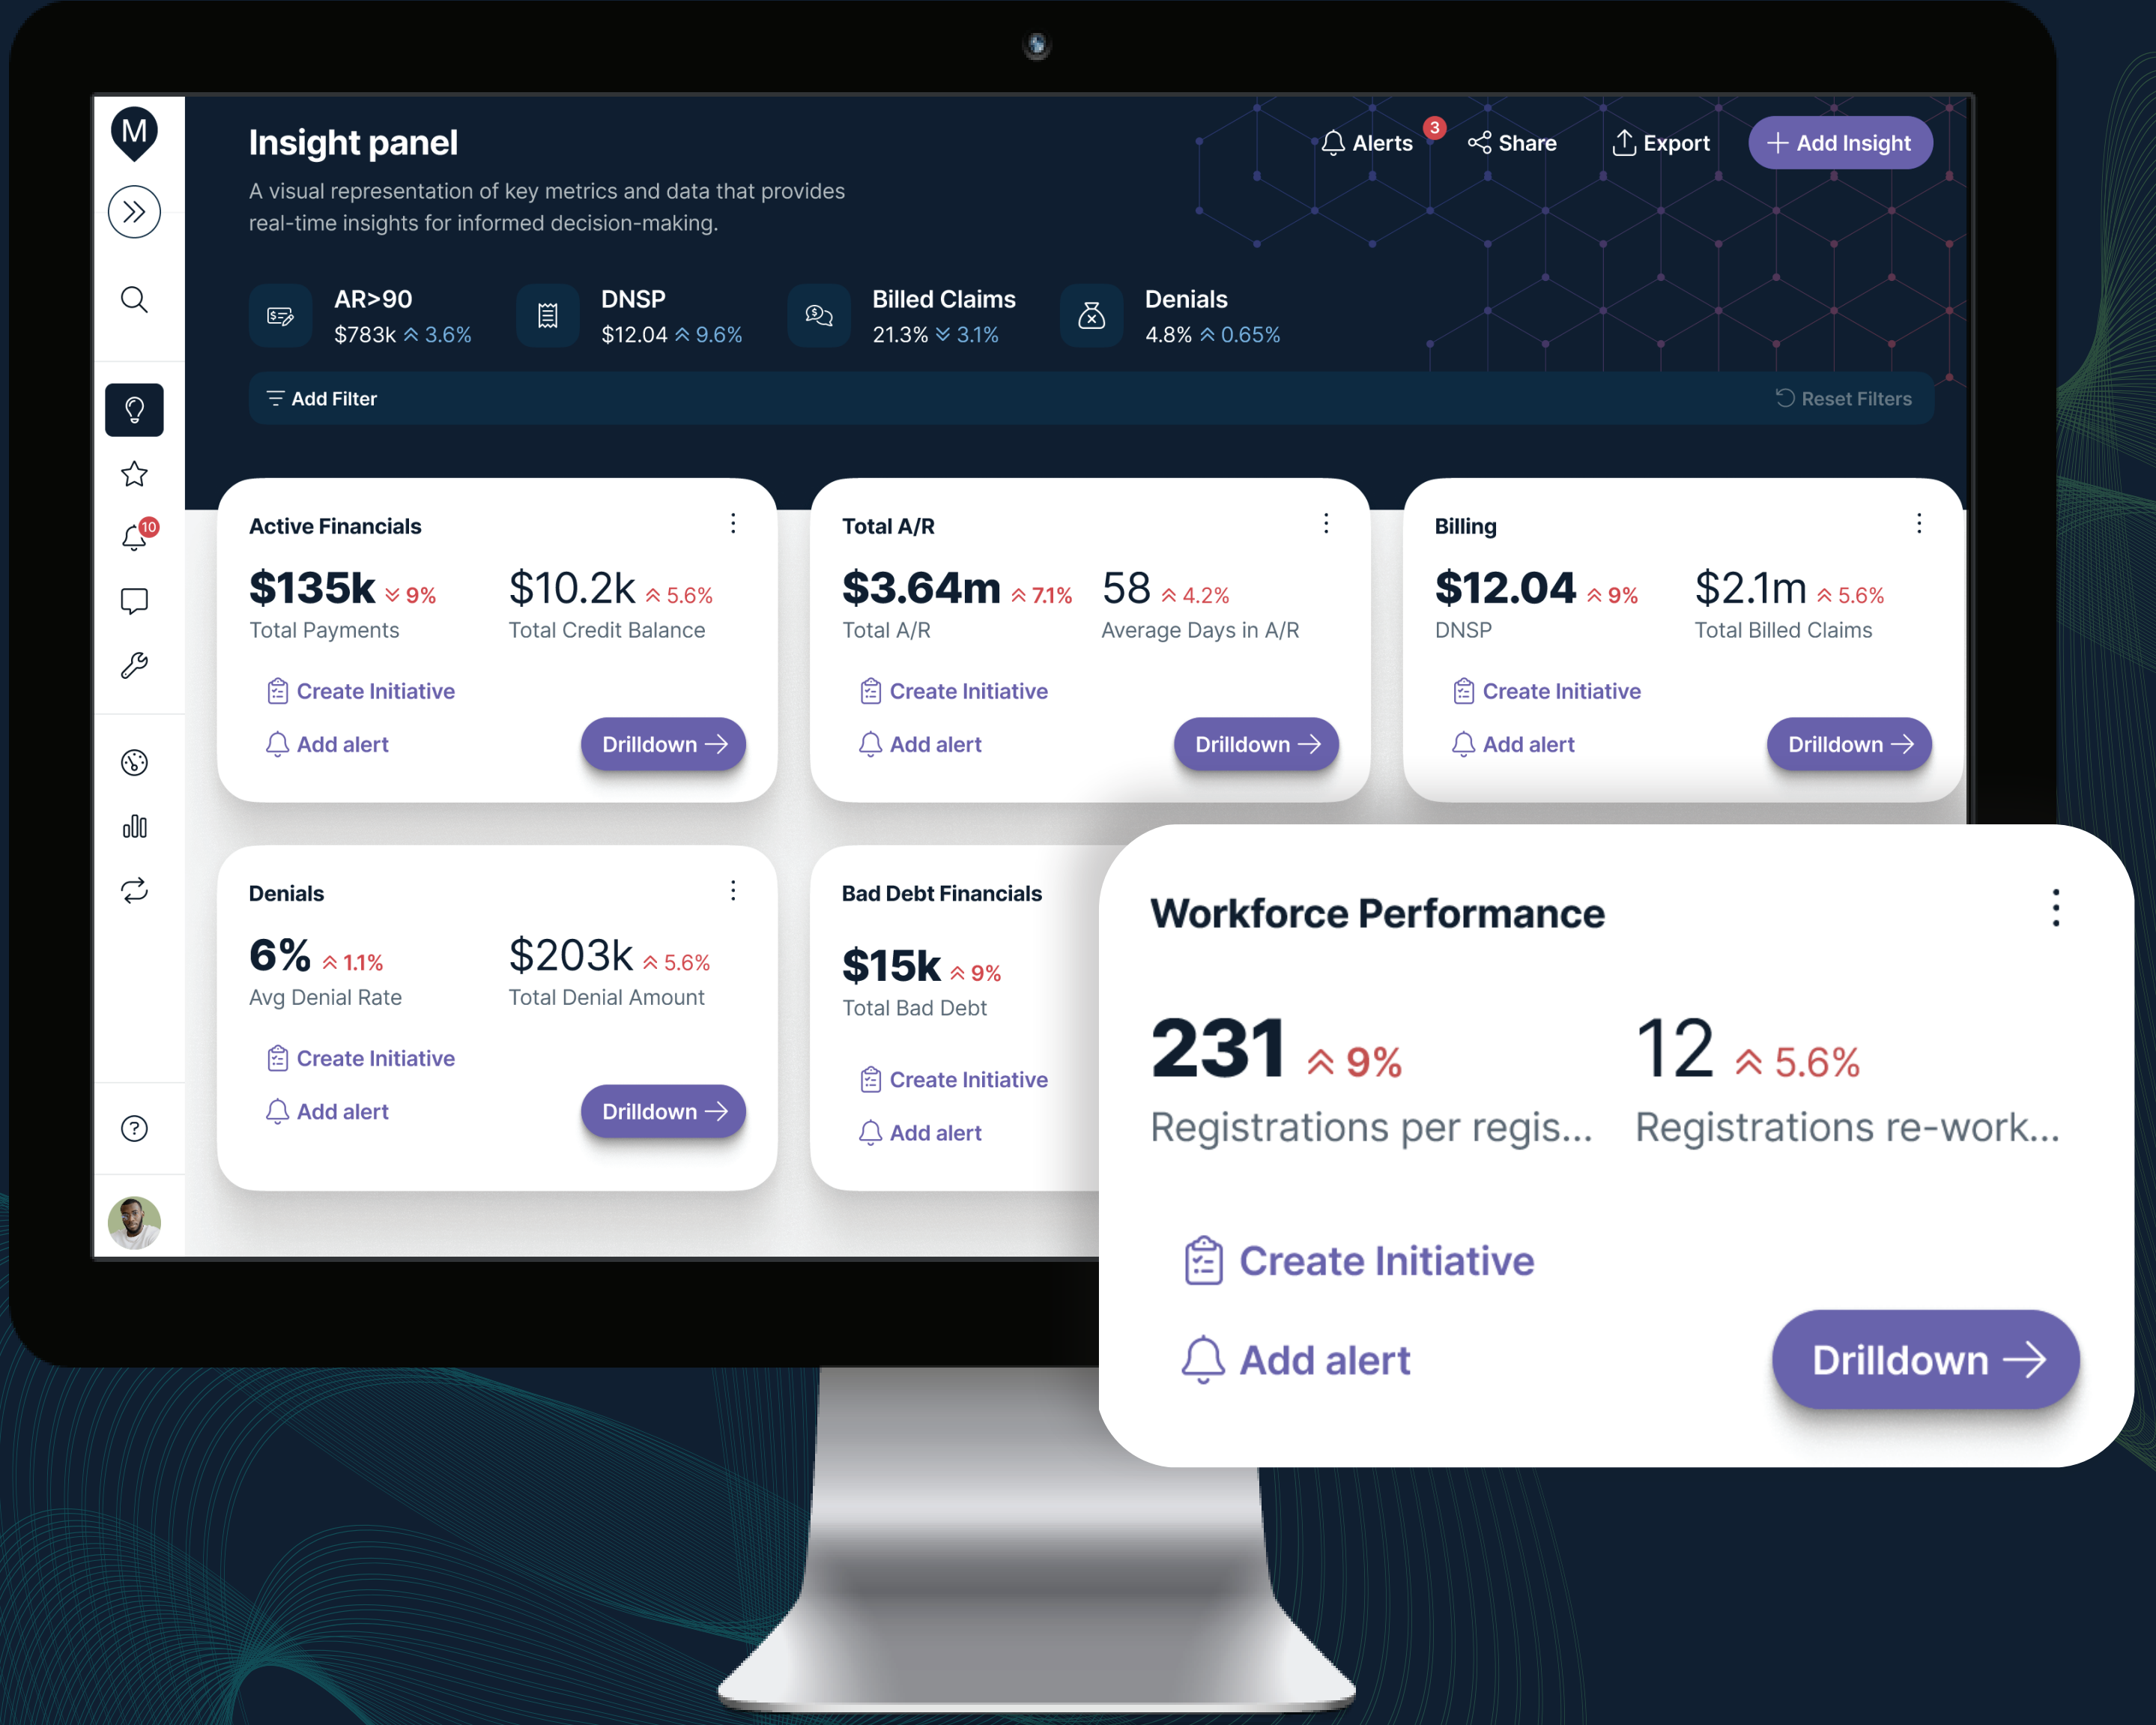

Drill down into reporting across enterprise, facility and individual levels

Quickly quantify ROI on training initiatives and new processes

Enhance EMR functionality and augment existing technology

Potential returns

Decrease days in AR by **15-25%**

Decrease denials by **10-20%**

Increase POS collections

Improve patient financial experience

Realize the power of advanced analytics using AI

Powered by MedeAnalytics Health Fabric™

A unified analytics framework purpose-built to help healthcare companies understand real-time, high-quality, high-fidelity data and surface the next best action to improve performance.
