Advanced audit and compliance solutions for today's modern teams

Audit and compliance teams are looking to work more efficiently as they respond to the ever-growing number of government and commercial audits. To do so, they require solutions that automate their work, provide robust communication capabilities to coordinate efforts, and provide rapid insights into auditing trends. Compliance+ identifies potential billing and coding risks by enhancing Audit Monitor with a risk rules engine. A product of the Revenue Integrity Suite, Compliance+ helps providers and managers to prioritize areas of focus, track trends over time, and create the action plans necessary to minimize organizational risk.

Compliance+ also extends the compliance team's analytics beyond proactive compliance risk analytics with mid-cycle denials analytics, basic accounts receivable analysis, and MEDPAR and PEPPER analysis.

This tool supports the tracking and management of all payer audits and saves you hours of work pulling together reports and drilling down into your data.

Why you need Compliance+

Decreasing margins are making it even more important to avoid revenue leakage caused by preventable audits and minimize the costs incurred to respond to audits. That requires a solution that enables working smarter not harder. Compliance+ goes beyond standard workflow and analytics by providing trends analytics that uncover target areas for education and proactive action for at-risk payments.

Reduce time uncovering at-risk claims and at-risk payments

Get actionable
insights into audit
trends

Effectively
respond to all
payer audits

Reduce time
spent building
reports

Support inpatient
and professional
services

Compliance+ enables you to:

- Reduce time spent on audits and increase appeals success rates by efficiently coordinating audit responses with case management, coding, CDI and physicians through a web-based workflow and document collection system.
- Connect root-cause analysis for trending audits to educational target areas that help to reduce future audits.
- Holistically manage hospital and professional fee audits independently or as part of a single-platform approach.

Measurable impact

- **Reduce time spent on reporting by 95%** using out of the box reports with 3 clicks to claim level details
- **Collaborative workflow tools** automate tasks, improving workforce performance
- **Increase appeal success rates** by using target area analytics and continuous risk monitoring

"A focus on decision-based insights has supported our teams in solving the problems of the day without distracting from ongoing metric performance improvement initiatives."

- Trevor Snow, VP of Health Information Management, Ardent Health Services
