

Monitor and manage the financial impacts of high-cost claimants

As medical and pharmacy costs continue to rise, employers are starting to purchase stop loss policies to help limit these expenses and mitigate against the risk of catastrophic or unpredictable losses. To understand how they are trending against their stop loss policies and predict and understand changes to costs in future policy years, employers require access to clear, comprehensive and actionable data.

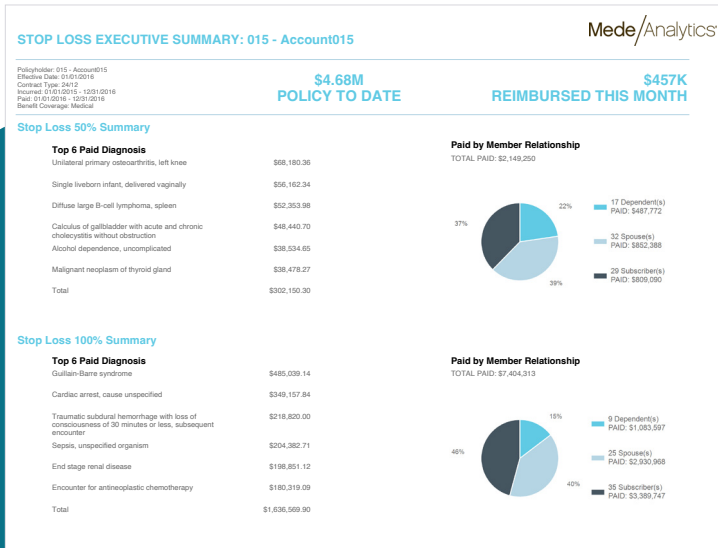

To support health plans in providing efficient data reporting and demonstrating their full value to commercial accounts, MedeAnalytics offers Stop Loss reporting as an optional add-on to our Employer Insights solution. This module aids payers in monitoring and managing the financial impact associated with potential catastrophic claims or rising costs in the overall population.

With Stop Loss, you can:

- Manage high-cost claimants and view a full picture of their utilization
- Automate an early warning system for employers to track when members are nearing their attachment point
- Easily track the effectiveness of stop loss offerings through targeted reporting
- Identify progression to stop loss targets for both specific and aggregate policies
- Report on the clinical conditions driving claims to help plan for future policy years

Stop Loss benefits health plans by allowing you to:

- Showcase the effectiveness and value of your services to commercial accounts
- Retain current business and gain more net new groups
- Relieve burden on analysts, increasing job satisfaction and loyalty
- Integrate data across departments and/or organizations (i.e., stop loss vendors)
- Improve overall operational efficiency and speed-to-insights
