

# Empower superior documentation integrity with intelligent insights

Clinical documentation integrity (CDI) is a never-ending race. CDI teams need a solution that supports continual improvement to help move past critical changes quickly and efficiently. This requires easily accessible analytics that can quickly pinpoint outliers and help identify where education is needed to make the greatest impact.

CDI Insights, part of the Revenue Integrity Suite, provides coding impact analysis, chronic conditions and HCC analysis, documentation and coding performance, and mid-cycle denials analytics. Trends and root cause analyses equip teams with the knowledge they need to take a strategic approach that can be measured and communicated across the organization. This powers better outcomes for all involved.

Whether you need a quick, top-line view, benchmark comparisons, or detailed drill-down analysis, CDI Insights offers fast, reliable answers to your important questions.

## Why you need CDI Insights

Strong CDI teams deserve strong tools to support their efforts. With self-service insights that EHRs and workflow tools often don't provide, CDI Insights empowers staff to efficiently drill down and analyze data by physician, specific codes, and benchmarking variances. Robust physician performance monitoring ensures that your CDI team builds targeted training to meet your organization's strategic goals. Even with the best workflow tools, staff still need data-powered insights to uncover what else can be done to achieve the superior documentation integrity that is required to move from good to great.

Monitor important metrics like case mix index and MS-DRG distribution

Get actionable insights into audit trends

Effectively respond to all payer audits

Reduce time spent building reports

Support inpatient and professional services

### With MedeAnalytics CDI Insights, you can:

- Have reports automatically created and sent to individuals that need to monitor core metrics such as CMI, CC/MCC capture rate, LOS, SOI, and others to rapidly identify areas of improvement for clinical documentation.
- Easily drill down to identify diagnoses that lack specificity and the physicians who struggle with it, allowing for specialized, not general education for your providers, all based on their own data.
- Identify areas of improvement for reducing denials (upcoding and over-coding).
- Perform Hierarchical Condition Category (HCC) Analysis to improve documentation performance and help ensure appropriate reimbursement aligned to a patient's risk adjustment factor (RAF).
- Achieve operational improvements in the utilization of CDI and clinical members valuable time by knowing where to focus greater efforts.

### Measurable impact

- **Out-of-the-box investigation reports** identify coding opportunities to increase and protect revenue
- Physician-level reporting allows for data-driven discussions and education planning, **improving CMI by 15-25%, CC/MCC capture rate by 20-35%**
- MS-DRG and secondary diagnosis drill-downs provide insights into where to focus efforts, **increasing staff productivity**

*"Actionable analytics from MedeAnalytics have been invaluable for our CDI program. We have seen measurable improvements which have augmented revenue capture."*

**- Jennifer Grubb, OHSU Assistant Dir. of Clinical Documentation, Coding and HCC**
