

Turn disconnected analytics into enterprise performance improvement

We don't just show you the problem. We help you solve it.

Disconnected data makes it hard to see the whole story of your members' health at the individual and population level. This can result in care interventions delivered too late or not at all. When this happens, member costs rise, experience and quality measures suffer, and your employer groups and brokers are left dissatisfied.

Improve financial performance and health outcomes at scale

MedeAnalytics Payer Enterprise Analytics gives you cross-domain visibility into cost, utilization, quality, network performance, enrollment, and social determinants of health (SDOH) at the member and population levels. It enables you to predict and improve outcomes and operationalize better MLR and administrative cost performance across lines of business.

Connect and integrate your siloed members' health data

Remove duplicative data and analytics infrastructure

Consolidate disconnected or redundant systems

Accelerate action with AI-generated plans informed by your organization's unique insights, expert advisors, and playbooks

Prove performance with ROI and plan effectiveness calculators

Connect

Transform and operationalize deep, broad data

Platform

Enterprise Healthcare Data Management Platform

Unify, connect, and enrich fragmented data at scale

Trust

Integrate comprehensive insights

Intelligence

Integrated AI-driven analytics for use-case specific intelligence

Surface insights that improve financial and care quality performance

Act

Convert insights into action for measurable improvement

Action

Next-best-action playbooks, AI, workflow automation, consulting

Convert insights into action to accelerate impact and ROI

Focusing on the largest financial, member, and employer group impact, we offer robust cost, utilization, enrollment, quality, network, and social risk data analytics.

1 Social Risk ↻

Identify your highest-risk member cohorts with integrated claims and SDOH data to improve risk and between-visit support.

2 Quality ↻

Optimize HEDIS, Stars, and value-based care performance, and identify and seamlessly communicate gaps in care with a member's primary care provider.

3 Network ↻

Build high-performing provider networks with real-time visibility into member coverage and provider outcomes.

4 Employer Group Performance ↻

Strengthen employer and broker relationships with transparent, data-driven insights and action plans for cost, utilization, population health, and more.

Organizations using Payer Enterprise Analytics have realized exceptional results

\$25M

in savings across five high-risk member cohorts

40%

reduction in readmissions

75%

reduction in ad-hoc employer report turnaround times

"Before MedeAnalytics, it was tough to get a clear picture because our data was fragmented. We had to pull information from different sources and piece it together just to make sense of things. Risk adjustment data was especially important for understanding the disease burden of new members and planning our next steps as we grew. **MedeAnalytics changed that instantly, giving us insights we wouldn't have had otherwise and making everything so much easier to navigate.**"

Senior Manager, Risk Adjustment & Quality Improvement
